

MARGINX INDIA

Customer Load Posting — Full Workflow & Design Specification

HSN Mapping · GST Rates · Multi-Product Loads · Smart Recommendations

Version 1.0 | margixindia.com | Internal Use Only

1. Document Purpose

This document defines the complete customer-side workflow for placing a load on Margix — from landing on the platform to load confirmed. It covers the step-by-step UI design, HSN code selection and mapping, GST rate auto-population, multi-product shipment support, and the recommendation engine that helps customers fill in accurate details.

This is the reference for the frontend team building the Post a Load flow and the backend team building the goods classification and GST calculation service.

2. Overall Workflow — Step by Step

2.1 The complete customer journey

Step	Screen / State	What Happens	Auth?
1	Landing page	Customer lands on margixindia.com, sees value prop and Post a Load CTA	No
2	Post a Load clicked	Multi-step form opens immediately — no login prompt	No
3	Step 1: Goods & HSN	Customer types goods name → system suggests HSN codes and GST rate auto-fills	No
4	Step 2: Multi-product	Customer adds one or more products to the load with quantities and weights	No
5	Step 3: Pickup & Delivery	Origin city, destination city, addresses, dates, contacts	No
6	Step 4: Transport	FTL/PTL, vehicle type, capacity, special handling, budget	No
7	Step 5: Review	Full summary — all products, HSN codes, GST rates, route, transport type	No
8	Submit Load clicked	OTP auth modal appears — customer signs up or logs in	Yes — triggered here
9	OTP verified	Business profile collected once (name, GSTIN, address)	Yes
10	Load submitted	Load ID generated, WhatsApp confirmation sent, dashboard updated	Yes

3. Step 1 — Goods Description & HSN Mapping

3.1 How HSN selection works

When the customer types the name of their goods, the system runs a smart search against an internal HSN master database and returns relevant suggestions with the HSN code, description, and applicable GST rate. The customer selects the best match. This removes the need for the customer to know their HSN code in advance — the system finds it for them.

3.2 HSN search UI design

- Customer types in a "Describe your goods" text field — minimum 3 characters to trigger search
- Dropdown shows up to 8 suggestions, each with: HSN Code, Short Description, GST Rate badge
- Customer taps the correct one — HSN code and GST rate auto-populate and lock
- If no match found: "Can't find your goods? Enter HSN manually" option with a text field
- A "Why is HSN needed?" tooltip explains: required for e-Way Bill and GST invoice generation

3.3 HSN master — key categories for Indian freight

📌 This is the core reference table for the HSN recommendation engine. The system should store this as a searchable database, not a static list.

Goods Category	Common Examples	HSN Code Range	GST Rate	E-Way Bill Threshold
Textiles & Garments	Fabric, readymade clothes, yarn	50–63	5% / 12%	₹50,000
Food & Agriculture	Rice, wheat, vegetables, spices	01–24	0% / 5%	₹50,000
FMCG / Consumer Goods	Soaps, toiletries, packaged food	33–34, 21	12% / 18%	₹50,000
Pharmaceuticals	Medicines, medical devices	30, 90	5% / 12%	₹50,000
Auto Parts & Components	Engine parts, tyres, accessories	87, 40	18% / 28%	₹50,000
Electronics & IT Hardware	Mobiles, laptops, components	84–85	18%	₹50,000
Steel & Metal Products	Bars, sheets, pipes, coils	72–73	18%	₹50,000
Chemicals	Industrial chemicals, dyes, paints	28–38	18%	₹50,000
Plastics & Rubber	PVC pipes, sheets, raw plastic	39–40	12% / 18%	₹50,000
Paper & Packaging	Boxes, cartons, paper rolls	48–49	12% / 18%	₹50,000
Furniture & Wood	Wooden furniture, MDF, plywood	44, 94	12% / 18% / 28%	₹50,000
Machinery & Equipment	Industrial machines, tools	84–85	18%	₹50,000
Construction Materials	Cement, bricks, TMT bars	25, 68, 72	12% / 18%	₹50,000
Perishables / Cold Chain	Fish, meat, dairy, vegetables	02–08, 16	0% / 5%	₹50,000
Hazardous Goods	Chemicals, explosives, gas cylinders	28, 36	18%+	All values

Goods Category	Common Examples	HSN Code Range	GST Rate	E-Way Bill Threshold
E-Commerce Returns	Mixed consumer goods returns	Various	Various	₹50,000
Exempt / Nil Rated	Fresh vegetables, milk, eggs, newspapers	01–04, 49	0%	Only if > ₹50k

3.4 GST rate auto-population logic

- When customer selects an HSN code, the GST rate field auto-fills and is read-only
- If the HSN code has multiple applicable rates (e.g. 5% or 12% depending on product specifics), show a secondary dropdown: "Select applicable GST rate" with the valid options only
- Display the GST breakdown on the review screen: Taxable value, CGST, SGST (intrastate) or IGST (interstate) — calculated from the declared goods value
- If goods value is not declared, GST fields show as "To be calculated on invoice"

📌 *E-Way Bill is required when consignment value exceeds ₹50,000. Show a live counter: "Current declared value: ₹X — e-Way Bill will be required" as the customer fills in values.*

4. Step 2 — Multi-Product Load Support

4.1 Why multi-product matters

Most real-world shipments carry more than one type of goods. A distributor might ship 10 types of FMCG products in one truck. A manufacturer might ship both finished goods and raw materials in a PTL load. Supporting multiple products per load makes Margix accurate for real use cases — not just simple single-commodity shipments.

4.2 Multi-product UI design

- Default: one product row visible when the form opens
- "+ Add Another Product" button below the first row — adds a new identical row
- Each product row contains:
 - Product name (text with HSN search)
 - HSN code (auto-filled from search or manual)
 - GST rate (auto-filled, read-only)
 - Quantity + unit (e.g. 200 boxes, 5 pallets, 1000 kg)
 - Weight in kg (per product line)
 - Declared value in ₹ (optional but recommended)
 - Special handling flag (fragile, temperature-controlled, hazmat) — per product
- Remove button (x) on each row except the first
- Running totals shown below the product list: Total weight (kg), Total declared value (₹), E-Way Bill required: Yes / No

4.3 Multi-product load — sample scenario

Product	HSN	GST Rate	Qty	Weight (kg)	Value (₹)
Wheat flour (maida)	1101	0%	500 bags	12,500	1,87,500
Refined sunflower oil	1512	5%	200 cans	4,000	3,20,000

Product	HSN	GST Rate	Qty	Weight (kg)	Value (₹)
Packaged spices	0910	5%	100 boxes	800	45,000
Soap & detergent	3401	18%	300 cartons	3,600	2,10,000
			TOTAL	20,900 kg	₹7,62,500

📌 Total declared value ₹7,62,500 — e-Way Bill mandatory. System auto-flags this and pre-fills the e-Way Bill trigger after carrier assignment.

4.4 Mixed GST rate handling

When a load has products at different GST rates, the system handles each product line independently for invoicing purposes:

- Each product gets its own line on the freight invoice with its applicable GST rate
- The e-Way Bill references the highest HSN value group or the primary commodity — system auto-selects based on weight/value majority
- If the load contains any hazmat product, the system flags the entire load as hazmat-mixed and restricts it to certified vehicles only

5. Smart Recommendation Engine

5.1 What the engine does

As the customer fills in the form, the system makes real-time recommendations to improve accuracy, reduce errors, and speed up the process. This is not optional polish — it directly reduces incorrect loads, failed e-Way Bills, and document disputes.

5.2 Recommendation triggers and outputs

Trigger	Recommendation Shown	Why It Matters
Customer types "cement"	HSN 2523 · Cement · 12% GST — Did you mean Portland cement?	Prevents wrong HSN selection
Customer types "medicine"	HSN 3004 · Pharmaceutical formulations · 5% OR 12% — Please select	Multiple GST rates for pharma need clarification
Total weight > 18 tonnes	"Your load may require a 20T+ vehicle — we recommend a 22-wheel trailer"	Prevents vehicle mismatch at pickup
Customer selects PTL + weight > 15 tonnes	"This weight is usually a Full Truck Load — would you like to switch to FTL?"	Corrects common PTL/FTL confusion
Pickup city = Mumbai, delivery = Delhi	"This is a long-distance interstate route — IGST applies, not CGST+SGST"	Tax clarity for customer
Declared value > ₹50,000	"E-Way Bill will be auto-generated after carrier assignment — make sure GSTIN is ready"	Prepares customer for next step
Goods category = Perishable	"Cold chain vehicle recommended — select Reefer truck in transport type"	Prevents ambient truck assignment for cold goods
Goods category = Hazmat	"Special permit required — driver ADR card and hazmat placards will be verified"	Sets expectations upfront
Customer enters same pickup and delivery city	"Pickup and delivery city are the same — is this a local/intra-city delivery?"	Catches data entry errors

Trigger	Recommendation Shown	Why It Matters
Pickup date = today	"Same-day pickup has limited availability — we recommend booking 24 hours in advance"	Manages expectations
No goods value entered	"Entering goods value helps generate accurate freight quotes and e-Way Bill"	Encourages value declaration
Customer adds 3+ products	"You can download a load template to fill in bulk and upload — saves time for repeat loads"	UX improvement for frequent shippers

5.3 Route-based freight rate estimation

After the customer enters pickup city, delivery city, weight, and vehicle type — before they submit — show a live estimated freight rate range:

- "Estimated freight for this load: ₹18,000 – ₹24,000 based on current market rates on this corridor"
- This is generated from: distance (Mapbox/Google Maps API) × per-km rate benchmark for that vehicle type and corridor
- Label it clearly as an estimate: "Actual rate confirmed after carrier assignment"
- If the customer entered a budget, compare it to the estimate: "Your budget (₹15,000) is below the market estimate — we recommend adjusting to ₹18,000+" with an option to update

6. Step 3 — Pickup & Delivery Details

Field	UI Type	Required?	Validation & Notes
Pickup city	Autocomplete — city search	Yes	Powered by Mapbox or Google Places API — Indian cities only
Pickup full address	Text area	Yes	Include landmark, pin code
Pickup pin code	Number — 6 digits	Yes	Auto-fills state for GST interstate/intrastate determination
Delivery city	Autocomplete	Yes	Same as pickup city → intrastate flag → CGST+SGST. Different state → IGST
Delivery full address	Text area	Yes	
Delivery pin code	Number — 6 digits	Yes	
Pickup date	Date picker	Yes	Min: today + 1. Weekends flagged as limited availability
Pickup time slot	Dropdown	Optional	Morning (6am–12pm), Afternoon (12pm–6pm), Evening (6pm–10pm)
Preferred delivery date	Date picker	Optional	Drives ETA expectation shown to carrier
Pickup contact name	Text	Yes	Person at loading point
Pickup contact number	Phone	Yes	Shown to driver for coordination
Delivery contact name	Text	Optional	
Delivery contact number	Phone	Optional	
Loading dock available?	Yes / No toggle	Optional	Affects vehicle type recommendation
Access restrictions	Text	Optional	e.g. No vehicles above 12T, basement loading only

📌 Pickup and delivery pin codes determine CGST+SGST (same state) vs IGST (different state) — this drives the GST calculation on the freight invoice and must be captured at load posting time, not after.

7. Step 4 — Transport Requirements

Field	UI Type	Required?	Notes
Load type	Radio — FTL / PTL	Yes	System recommends based on total weight entered in Step 2
Vehicle type	Dropdown with icons	Yes	See vehicle type table below
Required capacity (tonnes)	Number	Yes	Auto-suggested from total weight — customer can override
Temperature requirement	Toggle + range slider	If perishable	2–8°C, -18°C, ambient — auto-triggered if perishable goods selected
Special handling	Multi-select checkboxes	Optional	Fragile, do not stack, this side up, hazmat, ODC
Freight budget (₹)	Number	Optional	Compared to route estimate — warning shown if below market range
Request quotation from Margix	Checkbox	Optional	Margix ops team calls within 2 hours with a confirmed rate
Loading assistance required	Yes / No toggle	Optional	Labour at pickup — adds surcharge noted to customer
Unloading assistance required	Yes / No toggle	Optional	Labour at delivery

7.1 Vehicle type reference

Vehicle Type	Typical Capacity	Best For	Notes
Mini truck / Tata Ace	0.5 – 1.5 T	Local, intra-city, small PTL loads	Cannot run interstate without permit
Medium truck (14 ft)	2 – 4 T	Short distance interstate, PTL	Common in FMCG distribution
Large truck (17–20 ft)	5 – 7 T	Mid-distance interstate, FTL	
Container (20 ft)	10 – 12 T	Secure goods, interstate FTL	Weather protected
Container (32 ft / SXL)	15 – 18 T	High-volume FTL interstate	Most common long-haul vehicle
Flatbed / Open truck	10 – 20 T	Construction, steel, machinery, ODC	No weather protection
Reefer / Cold chain	5 – 15 T	Perishables, pharma, dairy	Temperature-controlled
Trailer (40 ft)	20 – 25 T	Heavy machinery, large FTL	Requires special route clearance for some roads
Tanker	Volume-based	Liquids, chemicals, fuel	Specialized — not standard in open marketplace

8. Step 5 — Review Screen

8.1 What the review screen shows

The review screen is a read-only summary of everything entered. Nothing is submitted yet. The customer can go back to any step and edit.

8.2 Review screen sections

- Load summary header: total weight, total declared value, route (City A → City B), pickup date
- Product list table: all products with HSN, GST rate, quantity, weight, value per line
- GST summary: breakdown by rate (0%, 5%, 12%, 18%, 28%) across all products — total taxable value, total GST, grand total
- E-Way Bill notice: "E-Way Bill will be auto-generated — required because total value ₹X exceeds ₹50,000" OR "Not required — total value below threshold"
- Route details: pickup address, delivery address, dates, contacts
- Transport: vehicle type, load type (FTL/PTL), special handling flags
- Estimated freight rate range (from Step 4 calculation)
- Submit Load button — large, prominent, yellow
- Edit buttons next to each section to go back without losing data

8.3 GST calculation display on review screen

Item	Taxable Value	GST Rate	GST Amount	Total
Wheat flour (HSN 1101)	₹1,87,500	0%	₹0	₹1,87,500
Sunflower oil (HSN 1512)	₹3,20,000	5%	₹16,000	₹3,36,000
Spices (HSN 0910)	₹45,000	5%	₹2,250	₹47,250
Soap & detergent (HSN 3401)	₹2,10,000	18%	₹37,800	₹2,47,800
TOTAL	₹7,62,500	—	₹56,050	₹8,18,550

For interstate loads (different state pickup and delivery), total GST shown as IGST. For intrastate, split as CGST + SGST equally.

9. Post-Auth: Business Profile Completion

After OTP verification, new users complete their business profile once. This data is reused for all future loads — they never fill it again.

Field	Type	Required?	Used For
Full name	Text	Yes	Account holder name
Business name	Text	Yes	Appears on LR, invoice, e-Way Bill
Account type	Radio	Yes	Customer / Business Partner — determines dashboard view and credit eligibility
GSTIN	Text + live validation	Required for Business Partner, optional for Customer	E-Way Bill, GST invoice, freight invoice

Field	Type	Required?	Used For
Business address	Text	Yes	Appears on all compliance documents
Pin code	Number	Yes	State determination for IGST vs CGST+SGST
Email ID	Email	Optional	Documents sent by email in addition to WhatsApp
Business type	Dropdown	Optional	Manufacturer, Trader, Distributor, Retailer, Exporter, Other
Average monthly loads	Dropdown	Optional	1–5, 6–20, 21–50, 50+ — used for account tiering

10. Load ID & Confirmation

10.1 Load ID format

MRX-YYYY-NNNNN | Example: MRX-2026-00142

- MRX = Margix prefix
- YYYY = year of submission
- NNNNN = 5-digit sequential number, zero-padded, resets each year

10.2 Confirmation screen

- Load ID displayed prominently with a copy button
- Route summary: pickup city → delivery city, date, vehicle type
- Next steps shown clearly: "Our team is matching a verified carrier — you will receive a WhatsApp update within [X hours]"
- "Track this load" button → My Loads dashboard
- "Post another load" button → resets form

10.3 WhatsApp confirmation message

Sent immediately on submission:

✓ Load Posted Successfully Load ID: MRX-2026-00142 Route: Mumbai → Delhi Pickup: 5 Oct 2026 Vehicle: 32 ft SXL Container Total weight: 20,900 kg Margix is matching a verified carrier. You will receive an update shortly. margixindia.com

11. Repeat Load & Template Feature

11.1 For frequent shippers

Customers who ship the same goods on the same route regularly should not refill the entire form every time.

- "Use previous load as template" — on the dashboard, each past load has a "Repost" button that pre-fills the entire form with the same details
- Customer only needs to update the pickup date and any changes
- Especially valuable for FMCG distributors, manufacturers with regular dispatch schedules

11.2 Bulk load upload (Phase 2)

- Download a CSV/Excel template with all required columns
- Fill in multiple loads (up to 50 per file)
- Upload — system validates each row, flags errors, submits valid rows as individual loads
- Each row generates its own Load ID

📌 Bulk upload is a Phase 2 feature — design the database schema to support it from day one even if the UI comes later.

12. Key Technical Requirements for This Flow

Requirement	Detail	Priority
HSN search API	Searchable database of 5,000+ HSN codes with GST rates — indexed for substring search, handles typos	P0 — blocks form
GST rate lookup	Returns GST rate(s) for a given HSN code — handles multiple-rate HSN codes with selection prompt	P0 — blocks invoice
Form state persistence	localStorage — survives page refresh, tab close, auth redirect	P0 — core requirement
Idempotency on submit	UUID generated at form open — server rejects duplicate within 10 min window	P0 — prevents duplicate loads
Interstate/intrastate detection	Compare pickup pin code state vs delivery pin code state — determines IGST vs CGST+SGST	P0 — GST compliance
E-Way Bill threshold flag	Live total declared value counter — flags when ₹50,000 threshold is crossed	P1 — compliance guidance
Freight rate estimation	Distance × per-km rate by vehicle type and corridor — approximate, not binding	P1 — customer expectation
HSN recommendation engine	Fuzzy search + synonym mapping (e.g. "clothes" → textiles → HSN 61–63)	P1 — accuracy
Vehicle type recommendation	Based on total weight, goods category, distance — auto-suggests vehicle type and capacity	P1 — reduces mismatch
WhatsApp confirmation	WhatsApp Business API template message sent on load submission	P1 — customer experience
Repost / template feature	Clone a past load as a new draft — all fields pre-filled, date editable	P2 — retention
Bulk CSV upload	Upload up to 50 loads in one file — validation, error flagging, batch submission	P2 — Phase 2

13. HSN Quick Reference — Top 50 Freight Goods in India

📌 This table is for the recommendation engine seed data. Expand to full 5,000+ HSN code database before launch.

Goods Name	HSN Code	GST Rate	Notes
Rice	1006	0%	Nil GST — no e-Way Bill if value under ₹50k
Wheat / Atta	1001 / 1101	0%	Nil rated

Goods Name	HSN Code	GST Rate	Notes
Sugar	1701	5%	
Edible oils (refined)	1512–1515	5%	
Salt	2501	0%	
Tea / Coffee	0902 / 0901	5%	
Spices	0904–0910	5%	
Biscuits / Snacks	1905 / 2106	18%	
Packaged drinking water	2201	18%	
Aerated drinks	2202	28% + cess	High GST — common freight
Soap	3401	18%	
Detergent	3402	18%	
Shampoo / Cosmetics	3305 / 3304	18%	
Medicines (generic)	3004	5%	
Surgical instruments	9018	12%	
Cotton fabric	5208–5212	5%	
Synthetic fabric	5407–5408	5% / 12%	
Readymade garments (< ₹1000)	6101–6217	5%	
Readymade garments (> ₹1000)	6101–6217	12%	
Footwear (< ₹1000)	6401–6405	5%	
Footwear (> ₹1000)	6401–6405	18%	
Mobile phones	8517	18%	
Laptops / computers	8471	18%	
TV / electronics	8528 / 8521	18% / 28%	
LED lights	9405	12%	
Wires & cables	8544	18%	
Steel bars / TMT	7213–7214	18%	
Steel sheets	7208–7212	18%	
Aluminium	7601–7616	18%	
Copper wire	7408	18%	
Cement	2523	12% / 28%	28% for > 25kg bags
Bricks	6901	12%	
Tiles	6907	28%	
Paints	3208–3210	18%	
PVC pipes	3917	18%	
Tyres (new)	4011	28%	

Goods Name	HSN Code	GST Rate	Notes
Auto parts (general)	8708	28%	
Engines / machinery	8407–8408 / 8479	18%	
Agricultural machinery	8432–8436	12%	
Tractors	8701	12%	
Furniture (wood)	9403	18%	
Mattresses	9404	18%	
Plywood	4412	12% / 18%	
Paper / cartons	4819	12%	
Books / newspapers	4901–4902	0%	Nil rated — no GST
Coal	2701	5%	
LPG cylinders	2711	5%	Domestic use — commercial may differ
Chemicals (industrial)	2801–2942	18%	Some items 12%
Pesticides	3808	18%	
Fertilizers	3102–3105	0% / 5%	Many exempt

MARGINX INDIA

Appendix A — Missing Shipment Documents & Road Operations Requirements

Purpose

This appendix adds document and operational requirements that are missing or incomplete in the Customer Load Posting PRD. It covers the transition from a submitted load to dispatch, delivery, trip closure and freight reconciliation.

A1. Documents to Add

No.	Document	Status / Requirement
1	Tax Invoice / Bill of Supply	Partially covered — support upload and capture document details.
2	Delivery Challan	Partially covered — support upload and details when applicable.
3	e-Way Bill	Incomplete — add EWB number, validity, transport references, vehicle details, upload and status management.
4	LR / GR / Transporter Consignment Note	Missing — generate a printable transport document after transporter acceptance.
5	Freight / Consignment Sheet	Missing — show freight, paid/to-pay amounts, delivery acknowledgement and remarks.
6	Proof of Delivery (POD)	Missing — capture receiver confirmation and delivery evidence.
7	Loading / Unloading Report	Not defined — record loading/unloading confirmation and quantities where needed.
8	Damage / Shortage Report	Not defined — record exceptions, quantities, photos and remarks.
9	Trip Closure Report	Not defined — record final delivery, trip closure and freight reconciliation.

Document rule: The customer's supplier invoice and the transporter's LR/GR or freight sheet are different documents. Allow customers to upload an existing invoice/challan and generate transport documents from the accepted load and assigned transporter details.

APPENDIX A — REQUIRED FIELDS

A2. Fields to Capture for Each Document

Document	Fields to Add / Confirm
Tax Invoice / Delivery Challan	Document type, number, date, seller/buyer names and GSTINs where applicable, dispatch-from and ship-to addresses, goods lines, quantities, values, uploaded PDF and linked Margix Load ID.
e-Way Bill	EWB number, generation date, validity/expiry, linked invoice/challan number and date, transporter ID/name, transport document number/date, vehicle number, approximate distance, uploaded document and status.
LR / GR / Transport Document	Transport document number/date, transporter identity, consignor/consignee, pickup/delivery addresses, vehicle number, goods description, packages, actual weight, route, freight amount and payment terms.
Freight / Consignment Sheet	Vehicle number, from/to locations, consignor/consignee, actual weight, rate, total freight, paid/advance, amount to pay, delivery acknowledgement and remarks.
POD	Delivery date/time, receiver name/contact, signature, delivery photo or signed POD upload, delivered quantity, shortage/damage details and remarks.
Loading / Unloading Report	Loading/unloading timestamps, loaded/unloaded quantities, weight where applicable, confirmation and supporting photos when needed.
Damage / Shortage Report	Exception type, affected quantity, description, photos, receiver remarks, report date and responsible person.
Trip Closure Report	Final delivery status, POD reference, final freight, additional charges, deductions, expenses, advance paid, balance payable, closure date and payment status.

A3. Missing System Functionality

- Generate a unique Load ID and link every document to the relevant load/trip.
- Generate printable LR/GR / transport documents and a freight/consignment sheet.
- Allow invoice, challan and e-Way Bill uploads, including adding documents after initial load submission.
- Allow e-Way Bill and vehicle details to be updated when required.
- Provide a pre-dispatch checklist for documents required for the specific movement.
- Flag missing, expired or inconsistent required information before dispatch.
- Track status from load acceptance through dispatch, delivery and trip closure.
- Capture POD, shortage/damage exceptions and supporting evidence.
- Reconcile agreed freight, advances, approved extra charges, deductions and balance payable.
- Maintain document history and record who created or updated each document.

APPENDIX A — V1 IMPLEMENTATION PRIORITY

A4. Recommended Build Order

Priority	Feature	Implementation note
P0 — Now	Invoice / Challan upload	Manual upload and metadata entry; do not require documents that are not yet available.
P0 — Now	e-Way Bill record and upload	Manual number/details and PDF upload first; paid API integration can be deferred.
P0 — Now	LR / GR / Transport Document	Generate from load, transporter, route, goods and assigned vehicle data.
P0 — Now	Freight / Consignment Sheet	Generate from agreed freight and payment terms; include paid/to-pay amounts and remarks.
P0 — Now	POD and delivery exceptions	Capture receiver confirmation, quantity delivered, photo/signature and damage/shortage.
P0 — Now	Trip closure and reconciliation	Calculate balance from freight, advances, approved charges and deductions.
P1 — Later	Automated e-Way Bill integration	Implement after confirming eligibility, access, provider terms and actual customer need.
P2 — Later	OCR, GST/HSN automation, paid GPS/toll integrations	Defer until shipment volume and business use justify recurring API costs.

A5. End-to-End Shipment Document Flow

Customer posts load	→	Margix reviews / quotes
Transporter accepts	→	Invoice / Challan attached
e-Way Bill recorded	→	LR / GR + Freight Sheet generated
Vehicle / Driver assigned	→	Pre-dispatch document check
Dispatch / Tracking	→	Delivery + POD
Damage / Shortage report if needed	→	Trip closure + freight reconciliation

Scope note: Document requirements vary by shipment, goods, route, transaction and applicable rules. Use conditional requirements rather than making every document mandatory for every load. This appendix defines software requirements and does not itself certify legal compliance.
